WHAT WENT WRONG?

SUPPLY IS LOW AGAINST DEMAND

YOUR BODY DON'T GET THE RIGHT NUTRIENTS FROM YOUR FOOD

☐ LOW NUTRIENT LEVELS IN SOIL

- Toxic pesticides from GM food crops found in unborn babies. Toxic pesticides which are implanted into genetically modified food crops have lodged in the blood of pregnant women and their unborn babies, research shows - (Times of India)

☐ COOKING METHOD

- Cooking veggies for a long period of time, or at a high temperature can destroy the nutrients, including those in the liquid.

☐ STORAGE & TRANSPORT

- Fruit and vegetables travel thousands of miles to reach supermarkets.
- Food that we assume is fresh and nutritious is often quite the reverse. Ex.- Spinach stored at room temperature loses between 50 and 90 percent of its vitamin C within 24 hours of being picked.

A balanced diet starts with the right soil, the right cooking and the right storage.

Good food habits today build a healthier tomorrow.

WHAT WENT WRONG ?

ACCUMULATION OF TOXINS IN BODY : PESTICIDE CHEMICALS IN FOOD **WHAT WE EAT**

- There are more than 1000 pesticides used around the world to ensure food is not destroyed by pests. Each pesticide has different properties and toxicological effects.
- According to WHO data, in 2012 an estimated 1,99,440 people died worldwide from unintentional pesticide poisoning.
- Of these deaths, 84% occurred in low and middle-income countries. In the same year, unintentional poisoning caused the loss of over 10.7 million years of healthy life.

For Example: it is estimated that deliberate ingestion of pesticides causes 3,70,000 deaths each year.
